MagicCode Super-Resolution Software Third-Party Notices

Document Version: v1.2.0

1. Purpose

This document identifies third-party software, SDKs, engines, frameworks, APIs, or open-source components that may be included in, linked by, referenced by, or used together with the MagicCode Super-Resolution Software release package. It is intended to support license compliance and customer review.

2. MagicCode Proprietary Components

The MagicCode native libraries, model parameter files, algorithm implementation, engine bridge code, product documentation, and MagicCode branding are proprietary to MagicCode Technology Co., Ltd. unless expressly stated otherwise in a separate written license or notice.

3. Third-Party Components and Platforms

Component / Platform	Typical Use	Notice
Unity	Unity plugin, C# scripts, sample projects	Unity is provided by Unity Technologies. Customers are responsible for complying with Unity license terms.
Unreal Engine	UE plugin, Blueprint/C++ bridge, sample projects	

Unreal Engine is provided by Epic Games. Customers are responsible for complying with Unreal Engine license terms.

Android SDK / NDK

Android build and runtime integration

Provided by Google or Android Open Source Project under their respective terms.

Apple SDKs and Frameworks

iOS/iPadOS/macOS integration, Metal, CoreVideo, Foundation

Provided by Apple under Apple developer terms.

Vulkan

Android GPU backend where enabled

Vulkan is maintained by the Khronos Group and platform vendors.

OpenGL / OpenGLES

GPU backend where enabled

OpenGL/OpenGLES specifications are maintained by the Khronos Group.

GLFW / GLEW

Development, demos, or desktop OpenGL support where included

If distributed, include their original license files and copyright notices.

4. Release Package Requirement

Before external distribution, include the original license files for any third-party open-source component actually shipped in the package. If a component is used only in internal development and is not shipped to customers, it does not normally need to be included in the customer package notices, but internal compliance

records should still be retained.

5. Customer Responsibilities

- Review and comply with third-party platform, SDK, engine, and store terms applicable to your product.
- Do not remove third-party copyright or license notices from files included in the release package.
- When redistributing a product that includes MagicCode plugins or libraries, ensure your distribution complies with MagicCode's license and all applicable third-party terms.

6. Recommended Final Release Action

Run a final dependency and package scan before each public release. Confirm whether GLFW, GLEW, Unity package files, Unreal Engine files, Android Gradle artifacts, or other third-party materials are actually shipped. Add their exact license texts to this notice package if they are included.
